- Implement Naïve Bayes method using scikit-learn library
 Use dataset available with name glass
 Use train_test_split to create training and testing part
 Evaluate the model on test part using score and classification_report(y_true, y_pred)
 - a) Importing the necessary libraries

```
[90] import pandas as pd
    from sklearn.model_selection import train_test_split
    from sklearn.naive_bayes import GaussianNB
    from sklearn.metrics import classification_report, accuracy_score
```

b) Importing glass.csv file for accessing data

```
[91] from google.colab import files
    # Uploading the glass data CSV file
    uploaded = files.upload()
    import os
    # we can see if the file uploaded in the current directory
    current_directory = os.getcwd()
    directory_contents = os.listdir(current_directory)
    print(directory_contents)

Choose Files    glass.csv
    • glass.csv(text/csv) - 10053 bytes, last modified: 9/14/2023 - 100% done
    Saving glass.csv to glass (1).csv
    ['.config', 'glass.csv', '.ipynb_checkpoints', 'glass (1).csv', 'sample_data']
```

c) Load the glass dataset

```
# Load the glass dataset
glass_data = pd.read_csv("glass.csv")
glass_data.head()
                                                             翩
        RΙ
              Na
                   Mg
                        A1
                               Si
                                     Κ
                                         Ca
                                             Ba
                                                  Fe
                                                     Type
  1.52101 13.64 4.49 1.10 71.78 0.06 8.75 0.0 0.0
                                                             ıl.
   1.51761 13.89 3.60 1.36 72.73 0.48 7.83
                                             0.0 0.0
  1.51618 13.53 3.55 1.54 72.99 0.39 7.78
2
                                             0.0 0.0
3
   1.51766 13.21 3.69 1.29 72.61 0.57
                                       8.22 0.0 0.0
   1.51742 13.27 3.62 1.24 73.08 0.55 8.07 0.0 0.0
```

d) Split the dataset into features and target and fitting naïve bayes model on training set

```
# Split the dataset into training and testing parts
x_train, x_test, y_train, y_test = train_test_split(x_train, y_train, test_size=0.2, random_state=0)

# Fitting the Naive Bayes model on the training data
gnb = GaussianNB()
gnb.fit(x_train, y_train)

v GaussianNB
GaussianNB()
```

e) Predicting the target on the test data and evaluating the model

```

2. Implement linear SVM method using scikit library

Use the same dataset above
Use train_test_split to create training and testing part
Evaluate the model on test part using score and
classification_report(y_true, y_pred)

a) Importing the necessary libraries

```
[98] import pandas as pd
    from sklearn.model_selection import train_test_split
    from sklearn.svm import SVC
    from sklearn.metrics import classification_report, accuracy_score
```

b) Split the dataset into features and target and fitting naïve bayes model on training set

```
# Split tha dataset into features and target
    x_train = glass_data.drop("Type", axis=1)
    y_train = glass_data['Type']

[100] # Split the dataset into training and testing parts
    x_train, x_test, y_train, y_test = train_test_split(x_train, y_train, test_size=0.2, random_state=0)

[101] # Fitting the linear SVM model on the training data
    svc = SVC()
    svc.fit(x_train, y_train)
```

c) Predicting the target on the test data and evaluating the model

```
[D] # Predict the target on the test data
     y_pred = svc.predict(x_test)
103] # Evaluate the model
    print("Accuracy:", accuracy_score(y_test, y_pred))
print("\nClassification Report:\n", classification_report(y_test, y_pred))

```

Which algorithm you got better accuracy? Can you justify why?

--> We got an accuracy of 0.37209302325581395 using Naïve Bayes method and an accuracy of 0.20930232558139536 using linear SVM method. So it is evident that Naive Bayes algorithm produced better accuracy when compared to SVM method because of the maximum correct predictions. Eventhough SVM's work with both linear and non-linear data, but can be particulary useful for non-linear data
